

Use Advanced Analytics To Help Prevent Energy Diversion

Honeywell's Revenue Protection Solution uses advanced predictive analytics to help utilities isolate areas of energy theft and provides case management assets using field tools.

A GLOBAL PROBLEM

\$96 BILLION*

Annual utility revenue loss due to theft, fraud and billing errors

TAKE CONTROL

Honeywell helps you learn when, where and how theft occurs.

Predictive Analytics

Inputs from smart meters, sensors, weather and publicly available data help identify areas of potential theft all in one platform. These data analytics utilize machine learning, refining analytics over time.

Field Tools & Mobile Applications

Provide visibility to areas of highest theft by reporting findings and visual evidence, along with other case management assets to the application. Algorithms refine over time to assist the predictive model.

90%*

REDUCTION IN Non-Technical Losses

through AMI metering paired with analytics

\$7.5B*

Projected Investment In Analytics

by utilities over the next ten years on revenue protection

HONEYWELL OFFERS A MULTIFACETED APPROACH

Honeywell's solution is designed to keep personnel safer.

Drones

fly to dangerous areas to document evidence of theft, protecting field personnel.

Advanced Analytics

looks for meaningful patterns in data to create actionable insights to better predict theft.

Social Programs

provide education in high theft regions to help address incidents and prevent future losses.

Protective Meter Enclosures

lock together a group of meters. If the lock is tampered with, the meters shut off electricity to all corresponding structures.
